

# GLOBAL TRANSPORT® – SECURE ECOMMERCE

## SECURE CLOUD-BASED PAYMENT PROCESSING FOR YOUR ECOMMERCE WEBSITE

Global Transport – Secure eCommerce is a suite of PCI certified, cloud-based solutions for processing credit and Visa Debit card payments through your website.

The integration process is designed to be quick and easy. Code samples are provided for insertion into the checkout section of your eCommerce website. When complete, follow simple instructions to connect your website to the Global Transport Gateway.

Typical eCommerce websites that accept and retain sensitive cardholder information are required to undergo an extensive and costly PCI security audit. With Global Transport – Secure eCommerce, consumers are redirected from your website to a PCI certified data centre for the collection, transmission and retention of payment information. Sensitive cardholder data is never present in your website environment, significantly reducing the efforts and costs associated with maintaining PCI compliance.

- **Designed for flexible and easy implementation**
- **PCI certified online customer checkout experience**
- **Reduces cart abandonment and increases sales completion to help drive revenue**

### The Global Transport – Secure eCommerce product suite includes:

- **Secure Page** – A hosted payment page solution with patented HTML Clone® technology to maintain the design, look and feel of your website for a seamless checkout process. As you update branding within your website the changes will automatically flow through to the hosted payment page in real-time, significantly reducing website maintenance and providing design continuity throughout your site.
- **Secure Link** – A simplified version of Secure Page, designed for quick and easy integration with your HTML eCommerce website. Secure Link enhances the transaction flow by providing online customer receipts, seamlessly completing the customer’s checkout experience.
- **Secure Form** – A hosted payment form designed for websites that use technology other than HTML (such as Adobe Flash or Java). Using iFrame technology, the product places the payment form within a “frame” on the webpage, connecting directly into Global Payments’ secure site. Since your customers remain on your website, order abandonments are nearly eliminated.
- **Secure Shopping Cart Plug-Ins** – Easy payments integration for popular, industry-leading shopping carts, including Magento®, X-Cart®, ZenCart® and osCommerce®. The shopping cart payment page maintains a design identical to the look and feel of your website during the checkout process, helping to reduce order abandonment and increase sales.

# Global Transport<sup>®</sup> – Secure eCommerce

## Key Features:

- No sensitive payment data is present in your website environment, significantly reducing your PCI scope and the costs associated with maintaining PCI compliance
- 3D Secure support – Verified by Visa<sup>®</sup> and MasterCard<sup>®</sup> SecureCode – provides additional authentication protection and helps reduce potential chargebacks
